

ETHICAL WEB SCRAPING

# A book price comparison engine

LibreLeaf turns a title or ISBN into verified, edition-specific offers from public bookstore pages.

PYTHON

FASTAPI

WEB SCRAPING

3 LANGUAGES

Discover.  
Compare.  
Read.

WHY THIS MATTERS

# The same title is not the same book.

Paperback, hardcover, translation, revision and eBook prices cannot be compared safely by title alone.

01 Identify

Resolve the requested title or validate the submitted ISBN.

02 Verify

Accept a store result only when its product data matches the exact ISBN.

03 Compare

Normalize visible prices without hiding unknown shipping or condition.

INSIDE THE

# scrapping pipeline

ZERO RETAILER KEYS

# Public prices. Exact editions.

Sources are included only when LibreLeaf can return an actual price and verify the requested ISBN.

**BR** Brazil
